Qwant launches Qwant @ Work, its free offer dedicated to companies to protect their data and the browsing of their employees

[Qwant @ Work](#), an offer to meet the privacy challenges of companies

[Qwant](#), the search engine "made in France", leader in Europe, which protects the privacy of its users by not collecting any personal data, is launching a **free offer** for companies. It is aimed at companies, administrations and organizations that wish to **strengthen the privacy** of their data by reducing the risks of collecting sensitive search data.

With this turnkey offer, company leaders will be able to easily deploy a concrete solution on all of their company's computer workstations to protect employee browsing and prevent data leakage:

[Qwant @ Work](#).

The browser extension [Qwant @ Work](#) :

- Installs **Qwant as your default search engine**, so you can search in privacy.
- **Blocks most cookies and trackers** - which automatically follow and store users' digital actions - beyond Qwant search pages. It also protects employees from most **malicious sites** and data leakage risks, thanks to an **anti-phishing list**.

[Qwant](#) offers a **privacy by design search engine**, which allows you to search the web in complete privacy. Qwant is a service developed and hosted in France. The [Qwant @ Work](#) offer is a response to the desire of more and more companies to preserve their **economic intelligence**, while guaranteeing **respect for the online privacy** of their employees.

[Qwant @ Work](#), an offer co-constructed with companies, to be as close as possible to their Internet search needs in complete privacy

With the development of this dedicated offering for businesses, [Qwant](#) wants to accelerate its deployment within companies, which are experiencing increasing data protection issues since the implementation of the GDPR four years ago, the increase in cyberattacks and data leaks and the arrival of the cyberscore for some of them.

[Qwant](#) wants to go further and **co-construct the future of this offering** with companies to meet their needs in terms of Internet search data protection. This co-construction will allow us to develop, test and integrate new features that will directly address these needs.

« In a context of increasing cyberattacks and data leaks, we want to bring with [Qwant @ Work](#) a simple, free and turnkey solution for companies to better protect their sensitive data and secure the browsing of their employees. Implementing tools that do not collect personal data, that block most trackers and cookies and that prevent phishing, is a key step to reduce risks. The next features will be developed in collaboration with the companies using our service, to offer them an offer that is as close as possible to their needs» **Raphaël Auphan, CEO of Qwant.**

« The access and implementation of simple and free protection solutions to preserve their 'economic intelligence' is not always obvious for companies and organizations, especially small ones; we are delighted to contribute to this with [Qwant @ Work](#) » added **Corinne Lejbowicz, Chairman of Qwant**
